

## Requirements

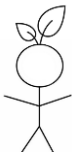

The following document outlines the requirements for the Online Plant Store System (OPSS). To ensure that all corners of the requirements finding process were covered, the **FURPS+** model to assess functional and on-functional requirements was considered.

### Functional

<b>Requirement ID :</b>	<b>FR001:</b> Select Item
<b>Definition:</b>	The system shall display detailed information when a user selects an item from the catalogue.
<b>Specification:</b>	<ul style="list-style-type: none"><li>- On click of a product in the BrowsePanel the system should:</li><li>- Form a SELECT query on the Product table</li><li>- Display a new ProductPanel with the following using JLabel's: 200x200 image of the product, product name, price and description</li></ul>

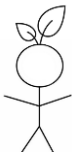

<b>Requirement ID :</b>	<b>FR002:</b> Cart Management
<b>Definition:</b>	Registered users may add products to their cart, from which they may alter the product quantity via a JSpinner
<b>Specification:</b>	<ul style="list-style-type: none"><li>- On click of the "Add to Cart" button the system must:</li><li>- Validate the user is first logged in</li><li>- Update the users cart object to display the product quantities and total price</li></ul>

<b>Requirement ID :</b>	<b>FR003:</b> Checkout Process
<b>Definition:</b>	Users complete the Order by initiating a checkout process, validated by inputting payment details
<b>Specification:</b>	<ul style="list-style-type: none"><li>- On click of the "Checkout" button the system must:</li><li>- Build a form to input: Card Number, Card Holder, Address, CVV and Expiration Date (via JComboBox's)</li><li>- On submit, the system will generate an INSERT query into the Orders table</li></ul>

<b>Requirement ID :</b>	<b>FR004:</b> Browse Catalogue
<b>Definition:</b>	The system shall display a populated catalogue of items with a scrollable UI
<b>Specification:</b>	<ul style="list-style-type: none"><li>- A JPanel displaying a series of product item containers which hold information about each product in the Product table.</li><li>- Products are retrieved via a SELECT query in the Products table</li></ul>

<b>Requirement ID :</b>	<b>FR005:</b> Order History
<b>Definition:</b>	Users must be able to view past orders with the aim of cancelling orders should they wish
<b>Specification:</b>	<ul style="list-style-type: none"><li>- A JTable displaying a history of all orders made by the logged in user.</li><li>- The table is populated via a SELECT query on the Customer table which INNER JOINS with the Orders table</li><li>- When an order is selected, the user may cancel the order by clicking the “Cancel Order” button.</li><li>- Onclick, a DELETE query in the Orders table is generated</li></ul>

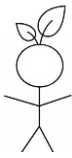

## Non-Functional

<b>Requirement ID :</b>	<b>NFR001:</b> Usability
<b>Definition:</b>	The system must be both learnable and accessible for new users
<b>Specification:</b>	<ul style="list-style-type: none"><li>- Learnability: Users must be able to comfortably adapt to the systems GUI, enabling them to purchase products quickly</li><li>- Accessible: The system must be designed bearing in mind users who may have vision impairments, such as font sizes, colours etc.</li><li>- Logging errors to a standard text file is a must, ensuring users can learn in more detail what errors may have occurred</li></ul>

<b>Requirement ID :</b>	<b>NFR002:</b> Reliability
<b>Definition:</b>	The system must reliably deal with invalid data input from the user
<b>Specification:</b>	<ul style="list-style-type: none"><li>- Data input must be handled appropriately according to what may constitute as “bad data” or malicious data.</li><li>- Preventative measures against SQL Injection by using prepared statements</li></ul>

<b>Requirement ID :</b>	<b>NFR003:</b> Performance
<b>Definition:</b>	The system must respond quickly and appropriately to user input
<b>Specification:</b>	<ul style="list-style-type: none"><li>- Interaction between the system and database must be seamless, ensuring the customer is met with a responsive application</li><li>- Any image scaling must be handled appropriately and with care, to ensure the performance drawback is not apparent to the user</li></ul>

<b>Requirement ID :</b>	<b>NFR004:</b> Supportability
<b>Definition:</b>	The system must be maintainable for future iterations and expansion
<b>Specification:</b>	<ul style="list-style-type: none"><li>- Code must be well documented and conform to standard Object-Oriented principles</li><li>- System architecture must be well organised and make use of a MVC structure</li><li>- Extensive version history must be available on a version control platform</li></ul>

<b>Requirement ID :</b>	<b>NFR005:</b> Security
<b>Definition:</b>	The system must be secure for the user to use
<b>Specification:</b>	<ul style="list-style-type: none"><li>- Any sensitive or precious data shall be handled with care</li><li>- Passwords must be securely stored in the database by first hashing the input. A standard SHA-256 algorithm may be deployed.</li></ul>
