#### **Summary**

A rapidly growing houseplant store wants to expand its business to build an online system in order to manage its expanding business and improve customer engagement. The system should aim to meet the following requirements:—

- a) Facilitate the buying of a diverse range of plants and plant accessories
- b) A comprehensive marketplace experience, making the interface accessible to the user
- c) The store catalogue must have a filter feature to enhance user experience, allowing users to sort items and accessories by price, type etc
- d) Users must also be able to set personal reminders, notifying them of when to water their plants

The system should also feature a user-interface which keeps the design aesthetics of the houseplant store in mind.

The system should allow users to browse the store catalogue, which will include filtering options such as plant species, type, price and accessory. Each plant listing will include brief descriptions, care instructions and pricing information, which can be visible when a customer selects a plant.

Once the user selects a plant, they can add it to their cart to proceed with the checkout process.

Another integrated feature should allow users to set a reminder by selecting a date. The reminder will take input on the plant type and species (e.g., succulent, tropical, houseplant) and notify the user of when to next water their plant.

### **User Stories**

Story ID :	STK001
Story Name:	Select Item
Description:	As a customer I need to select a plant so that I can then add it to my basket.
Confirmation:	User successfully selected a plant

Story ID :	STK002
Story Name:	Add to Cart
Description:	As a customer I need to add items to my cart so that I can purchase
	multiple items at once
Confirmation:	User has accumulated a basket

Story ID :	STK003
Story Name:	Checkout
Description:	As a customer I need to checkout so that I can get plants to decorate
	my room
Confirmation:	User receives their items

Mark Lambert Growing Pains C00192497 4

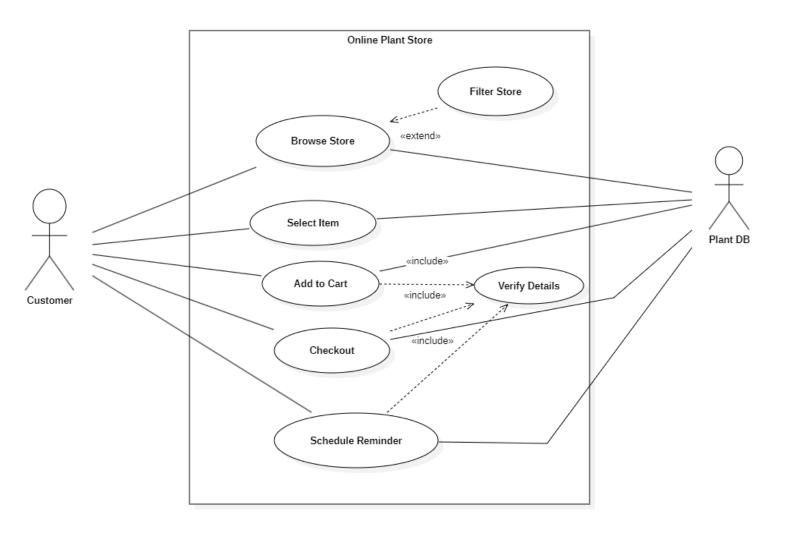

Story ID :	STK004
Story Name:	Schedule Reminder
Description:	As a plant owner I would like to be able to set a reminder on when to
	water so that I don't forget
Confirmation:	User received a reminder

Story ID :	STK005
Story Name:	Filter Catalogue
Description:	As a customer I want to filter the catalogue by types so that I can only see plants that are relevant to my interests and climate
Confirmation:	Store has filtered to relevant tags

Story ID :	STK006
Story Name:	Browse Catalogue
Description:	As a customer I need to browse the catalogue so that I can see all items available to purchase
Confirmation:	User can interface with the catalogue

# **Use Case Diagram**

# **Use Case Scenarios**

Use case name: Select Item	UniqueID: UC001	
Area: Web store		
Actor(s): User		
<b>Description:</b> Allow user to select an item for	rom online store	
Triggering Event: User clicks on a product		
Trigger type: External Temporal		
Steps Performed (Main Path)	Information for Steps	
User visits online store	URL link	
<ol><li>User begins browsing catalogue of items</li></ol>	Store database	
<ol><li>Clicks an item - so as to view more information</li></ol>	User, Store database	
Preconditions: User has internet connection to visit store		
Postconditions: Store GUI updates to represent the user's selection		
Assumptions: User wants to select an item		
Requirements met: User can select an item from store		
Outstanding issue(s): Ability to select multiple items		
Priority: 1		
Risk: User wants to go back and select a new item		

Use case name: Add to Cart	UniqueID: UC002	
Area: Web store		
Actor(s): User		
<b>Description:</b> Customer may add a selected	d item to their cart	
Triggering Event: User selects item to add		
Trigger type: External Temporal		
Steps Performed (Main Path)	Information for Steps	
1. User visits online store	URL link	
2. User logs into the system	User, store database	
<ol><li>User begins browsing catalogue of items</li></ol>	Store database	
<ol> <li>Clicks an item - so as to view more information</li> </ol>	User, Store database	
5. User clicks "add to cart" button	User, Store database	
Preconditions: User visits website		
<b>Postconditions:</b> System updates cart to re	flect item added	
Assumptions: User wants to add items to their cart		
Requirements met: User can add item to cart		
Outstanding issue(s): Customer may want to add an item no longer in stock to cart		
Priority: 2		
Risk: Customer must have an account in order to add items to their cart		

Use case name: Checkout	UniqueID: UC003	
Area: Web store		
Actor(s): User		
<b>Description:</b> Allow user to checkout their	cart	
Triggering Event: User clicks "proceed to d	checkout"	
Trigger type: External Temporal		
Steps Performed (Main Path)	Information for Steps	
User visits online store	URL link	
2. User logs into the system	User, store database	
User begins browsing catalogue of items	Store database	
Clicks an item - so as to view more information	User, Store database	
5. User clicks "add to cart" button	User, Store database	
6. User clicks "proceed to checkout"	User, Store database	
7. User inputs personal information (payment details, address, phone number)	User, Store database	
8. User selects confirm order	User, Store database	
System confirms Order     Completed Successfully	Store database	
<b>Preconditions:</b> User has a cart of item(s)		
Postconditions: System updates to confirm purchase		
Assumptions: User has money		
Requirements met: User has successfully purchased item		
Outstanding issues: Checkout a cart as a gift		
Priority: 3		
Risk: Order may not be successful if user doesn't input personal details correctly		

UniqueID: UC004		
s to specify a more narrow range of items		
Information for Steps		
URL link		
Store database		
User, Store database		
User, Store database		
User, Store database		
Store database		
catalogue		
lect the filter		
-		
Requirements met: User can apply a filter to store catalogue		
Outstanding issues: Ability to apply multiply filters		
Priority: 2		
Risk: If the user applies too many filters, no items will be displayed		

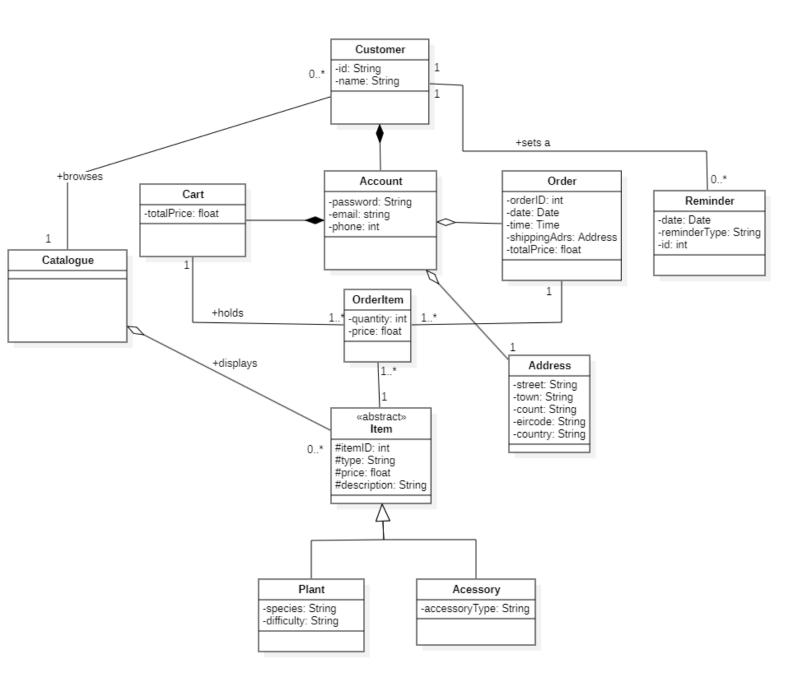

<b>Use case name:</b> Schedule Reminder	UniqueID: UC005	
Area: Web store		
Actor(s): User		
<b>Description:</b> User can schedule plant water	ering reminders	
Triggering Event: User wants to schedule a	a reminder	
Trigger type: External Temporal		
Steps Performed (Main Path)	Information for Steps	
User visits online store	URL link	
2. User logs into the system	User, store database	
3. User selects "schedule reminder"	User, store database	
User inputs the date they wish to schedule reminder	User, store database	
<ol><li>System updates to confirm the reminder has been set</li></ol>	Store database	
Preconditions: User has an account		
Postconditions: Store GUI updates with confirmation		
Assumptions: User wants to schedule a reminder		
Requirements met: User successfully schedule reminder		
Outstanding issues: Ability to set an audio notification		
Priority: 5		
Risk: Reminder will not be able to be set for a date in the past		

<b>Use case name:</b> Browse Catalogue	UniqueID: UC006	
Area: Web store		
Actor(s): User		
<b>Description:</b> Allow user to browse and interface with the catalogue of items		
Triggering Event: User clicks on home pag	е	
Trigger type: External Temporal		
Steps Performed (Main Path)	Information for Steps	
1. User visits online store	URL link	
<ol><li>User begins browsing catalogue of items</li></ol>	Store database	
Preconditions: The catalogue has items available to display		
Postconditions: Store GUI updates to show catalogue		
Assumptions: User wants to view catalogue		
Requirements met: User can browse the catalogue of items

### **Test Cases**

Name	TC-001: Select Item
Requirement	Verify that the system successfully updates to display details of a
	selected item from a database of items.
Preconditions	The system is displaying the full catalogue
Steps	1. Click on the <b>image</b> of the third item.
	2. Return to previous page
	3. Click on the <b>name</b> of the first item.
	4. Return to previous page
Expected	1. The item details window appears, with a larger image and
Results	more detailed information
	2. Verify that items can be selected by clicking icon <b>or</b>
	thumbnail
	3. Return to browsing catalogue

Name	TC-002: Add to Cart
Requirement	Verify that the system successfully allows a user to enter item(s) to
	cart.
Preconditions	The user is viewing the catalogue
Steps	1. Click on the <b>second</b> product
	2. Click the "Add to Cart" button
	3. Return to catalogue
	4. Click on the <b>fourth</b> product
	5. Change <b>quantity</b> to 2, add to cart
Expected	1. The item details window appears, with a larger image and
Results	more detailed information
	2. The system alerts the user to the fact that the item has been
	added successfully
	3. Return to browsing catalogue

Name	TC-003: Checkout
Requirement	Verify that the store system successfully allows the user to
	checkout their items
Preconditions	The customer has items in their cart
Steps	1. Click on the <b>View Cart</b> button
	2. Click on the <b>Proceed to Checkout</b> button
	3. Enter your <b>login details</b>
	4. Input <b>personal information</b>
	5. Click on the <b>Confirm Order</b> button
Expected	<ol> <li>The system displays the users Cart</li> </ol>
Results	2. The system begins the Checkout process
	<ol><li>System prompts user for login details</li></ol>
	4. System prompts user for shipping & billing information
	5. System updates to confirm to the user that their order has
	been successfully placed

Name	TC-004: Filter Catalogue			
Requirement	Verify that the system allows the user to apply filter(s) to the Catalogue of Items			
Preconditions	The system is displaying the full catalogue			
Steps	<ol> <li>Click on the Filter button</li> <li>Select one filter</li> <li>Click the Apply Filter button</li> <li>Click on the Filter button</li> <li>Select another filter</li> <li>Click on the Apply Filter button</li> </ol>			
Expected Results	The system updates to show a list of filters to choose from     When applied, the system displays just items matching the			
nesuits	<ul><li>2. When applied, the system displays just items matching the filter tag</li><li>3. Applying another filter will result in a more specific list of items</li></ul>			

Name	TC-005: Schedule Reminder
Requirement	Verify that the system successfully sets and alerts the user when a
	Reminder is Scheduled
Preconditions	The user is logged in
Steps	1. Click on the <b>Schedule Reminder</b> button
	2. Input todays date
	3. Click on the <b>Set Reminder</b> button to confirm
Expected	The system will display the Schedule Reminder page
Results	2. The system will update to display the reminder the user has
	just input

Name	TC-006: Browse Catalogue
Requirement	Verify that the system allows the user to browse the catalogue of items
Preconditions	The user is on the page displaying the catalogue
Steps	<ol> <li>Click on the <b>Home</b> page</li> <li>Scroll to browse the catalogue</li> </ol>
Expected Results	The system will update in real time to display the catalogue – containing items - for the user
